01 · UNDERSTANDING THE NEED

The gap isn't in availability of services, but in their discoverability, accessibility, and trust

Understanding the Need

Across India, daily-wage and short-duration workers often depend on physical gathering points, informal networks, word of mouth or personal contacts leaving youth lack work opportunity — while people who need workers immediately may not know who is available nearby

DEMAND "I need an electrician today at 5 PM." ≠ **AVAILABILITY** "I am available nearby right now." →

1 CURRENT CHALLENGES

- Discovery depends on word of mouth, contacts or physical gathering points.
- Static listings do not show who is available right now.
- Urgent tasks can require repeated calls and manual searching.

2 USER IMPACT

- Workers can be ready to work but remain invisible to new customers.
- Households and small businesses may not know who can take a task nearby.
- Unfamiliar parties have no simple, shared discovery path.

3 MARKET RELEVANCE

- The need spans everyday local work and short-duration tasks.
- The problem is time-sensitive: relevance changes with availability.
- The opportunity is live discovery — not another static directory.

Demand and available workers may exist at the same time — but are not visible to each other at the right moment and immidiate small works would take more time to solve

02 · THE PROPOSED SOLUTION

A live matching layer for immediate and short-duration local work.

What it is — CitySahayak is a digital platform that connects customers with skilled and trusted local workers based on their skills, experience, ratings, availability and Trust Score.

How it helps — CitySahayak makes it easier for customers to find the right local worker by providing their skills, experience, ratings, availability and Trust Score in one place

Key benefit — It transforms Fragmented local labour into a real-time, intelligent service network

THE TRUST GAP	OUR SOLUTION
Difficulty finding reliable workers	Search & Filters
Skills or experience hard to judge	Digital Trust Card
Lack of trust before hiring	Trust Score + Ratings
Low digital visibility	Digital Worker Profiles

Verified Skills. Trusted Workers.

DIGITAL TRUST CARD

CARD ID CSK8X9L21

RAMESH KUMAR

Plumber

Experience: 7 Years

Location: Bengaluru, Karnataka

TRUST SCORE

92 Excellent

ID Verified · Skills Verified · Experience Verified · Background Verified

RATINGS

4.6 / 5

Based on 128 reviews

SKILLS

Plumbing · Pipe Fitting · Leak Repair · Sanitary Installation · Bathroom Fitting

VERIFIED. TRANSPARENT. TRUSTED.
Scan or enter Card ID to view full profile and verification details.

03 · TECHNICAL APPROACH

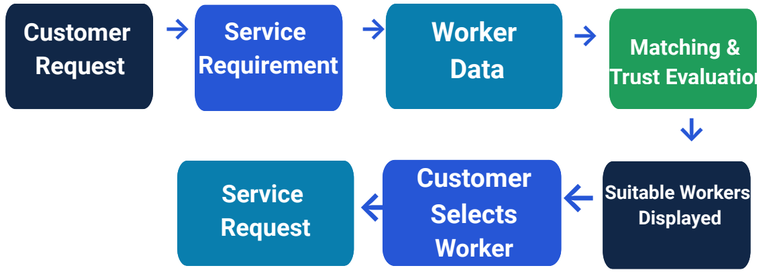

1 USER INTERACTION

- Customer selects the required service
- Views available worker profiles
- Checks skills, experience, ratings, availability & Trust Score
- Selects a suitable worker and connects with them.

2 CORE LOGIC

- Match required skill/service with worker skills
- Check availability
- Consider experience & ratings
- Use Trust Score as a trust indicator
- Display suitable workers to the customer.

3 DATA FLOW

1. **Worker Profile Explore** verified worker profiles
2. **Verification Concept** Verify identity, skills, experience and background
3. **Digital Trust Card** Generate a tamper-proof digital trust card
4. **Trust Score + Ratings + Skills** View trust score, ratings and verified skills
5. **Search & Filters** Find the right worker using smart search and filters
6. **Trusted Selection** Select and connect with confidence

TECHNOLOGY STACK

React.js Frontend	Vite Build Tool	Tailwind CSS Styling	JavaScript/JSX Language	Local Mock Data Data Source

PROTOTYPE MODULES

Home	Worker Explorer	Search/ Filters	Worker Details	Trust Card	Card Verification

04 · KEY FEATURES & INNOVATION

Don’t search. Just state your need — we’ll match you with a trusted, verified, and highly rated Sahayak.

1 UNIQUE SELLING POINTS

Live Availability

Match only workers whose availability window is active and are well exoerienced

Intent-to-Match

Users describe the need naturally instead of searching categories which makes service easier

2 TECHNOLOGICAL EDGE

AI understands intent

LLM converts natural language into structured task fields.

Rules rank the match

Backend logic applies skill, locality, time and availability constraints.

3 USER EXPERIENCE

1. Say what you need
2. See live local matches
3. Accept → ETA → Work

TRADITIONAL DISCOVERY

POST → SEARCH → CONTACT → WAIT

CITY SAHAYAK

NEED NOW → AI UNDERSTANDS → LIVE AVAILABILITY → DYNAMIC LOCAL MATCH → TRUST → CONNECT

FROM LISTING DISCOVERY → LIVE MATCHING

AI understands the problem, identifies the required service, and connects the user with a verified Sahayak based on skill, experience

05 · FEASIBILITY AND IMPACT

A narrow MVP can prove the core matching loop without building a full employment marketplace.

1 FEASIBILITY & VIABILITY

HACKATHON MVP

Essential build loop

WORKER REGISTRATION | SKILL + AVAILABILITY | WORK REQUEST | AI EXTRACTION

LOCAL MATCHING | ACCEPT / REJECT | ETA / STATUS

Challenges → mitigation

Outdated availability	→	Expiring window + reconfirmation
Incomplete request	→	AI asks targeted clarification
No exact match	→	Expand radius / adjust time
Unfamiliar parties	→	Basic verification + trust signals

2 IMPACT & BENEFITS

Workers	Make current availability discoverable with experiencce and transparency
Households	Find local help for immediate tasks any time quickly
Small businesses	Find short-duration workers when needed and help them work beyond networks

Scalability

LOCALITY → CITY → MULTI-CITY

Broader benefit

Reduce the information gap between people who need work done and people ready to work making an easier environment for both the needer and the helper

06 · BEYOND THE HACKATHON

Start with one reliable local matching loop, learn from real use, then expand.

1 NEXT STEPS

- Pilot in a defined local area.
- Observe matching failures and improve task/skill taxonomy.
- Test availability and user behaviour.

2 SCALABILITY

- Add more work categories without changing the core matching loop.
- Expand from locality → city → multiple cities.
- Reuse the same structured request + matching architecture.

3 LONG-TERM VISION

Make local work reliable Quick discoverable in real time.

NEED → MATCH → WORK

CITYSAHAYAK· FINAL USER JOURNEY

One request. One live matching loop. One clear path from need to work. AI made it easy to search skilled workers anytime and anywhere

1 NEED

?

"My laptop isn't charging and i have a presentation in an hour"

Natural-language request

2 UNDERSTAND

SKILL | TIME | PLACE | URGENCY

Skill • Location
Time • Urgency

AI extracts intent

3 MATCH

- Worker 1 — 0.9 km
- Worker 2 — 1.5 km
- Worker 3 — 2.1 km

3 relevant workers available nearby

Live matching

4 CONNECT

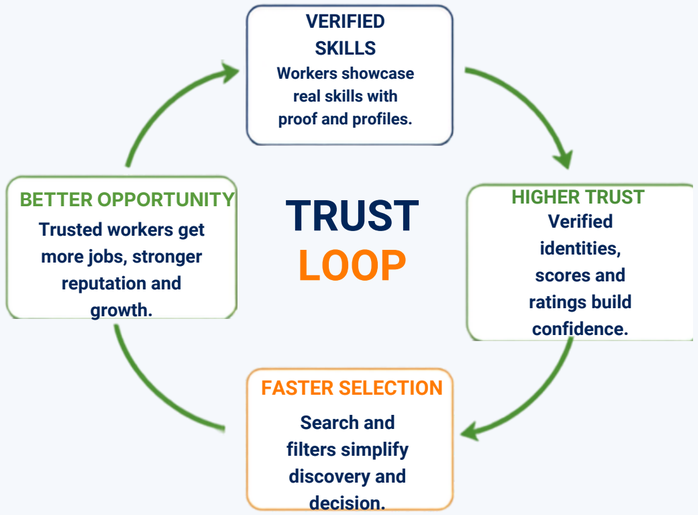

ACCEPTED

ETA 12 min

JOB ACTIVE

Accept → ETA → Job

Worker confirms

FOR SKILLED WORKERS

Digital visibility Structured profiles
Proof-of-skill Trust Card Reputation and opportunity growth

ECOSYSTEM BENEFITS

Bridging trust gaps
Digitizing informal skills Supporting local cooperatives Enabling transparent hiring

FOR CUSTOMERS

Faster discovery
Simplified selection with search & filters
Confidence through Trust Score and ratings
